

Frequently Asked Questions

What is IQm?

IQm is a revolutionary cellular PVC product with an acrylic based cap for enhanced weathering and color retention. IQm is the first cellular product on the market to offer a wide variety of colors to compliment the exterior of any project.

What is the difference between IQm and traditional wood trim products?

IQm won't rot, split or peel, is impervious to insects and is backed by a limited lifetime warranty.

What is the difference between IQm and traditional cellular PVC trim products?

IQm is a capped cellular PVC trim product. The acrylic based cap provides enhanced weathering and superior color retention. No painting necessary!

Does IQm have a built in J-Channel?

Yes! IQm trim boards and corners feature an integrated J-Channel which provides an easier installation than trim boards. The integrated J-Channel helps conceal unsightly cut edges and excessive caulk applications that detract from the visual appeal of siding installations.

What type of siding applications can be used with IQm products?

IQm trim boards and corners have a 1" pocket depth to accommodate a variety of siding applications including Wood, Fiber Cement, Vinyl and Stone.

What is the Aqua-Flex™ water management feature?

The Aqua-Flex is a patent pending design feature that uses the integrated J-channel and a flexible fin to direct water away from the face of the wall, reducing the likelihood of water intrusion and mold.

Does the Aqua-Flex replace standard window flashing techniques?

The Aqua-Flex does not replace standard window or siding flashing requirements. Windows, doors and other openings must be flashed in accordance with the manufacturer's guidelines and local building codes prior to installing the IQm product.

Can IQm products be heat formed?

No. Heat forming could compromise the Aqua-Flex fin and integrated j-channel.

Can you paint IQm products?

Painting the IQm product will void the product warranty.

What type of warranty does IQm offer?

IQm trim boards and corners are backed by a limited lifetime warranty.

What type of tools are needed to install IQm products?

IQm trim boards and corners can be installed using standard wood working tools (hand or power saw with carbon tipped blade, hand or power drill with carbon tip, hammer or nail gun). It can be cut, drilled, nailed or screwed just like wood trim.

How do you clean IQm?

IQm products can be cleaned using a mild detergent and water.

How many colors is IQm available in?

IQm trim boards are available in 16 colors plus white.

What type of fasteners are recommended for IQm?

We recommend a high-quality fastener, such as stainless steel or hot-dipped galvanized.
